

For the next assignment you be creating two separate groups of designs that must be organized utilizing the layer feature in Illustrator. Each group will have four separate designs and each of those designs must include a background layer and content layer. All layers must be named appropriately.

- Each individual design must contain at least 5 original shapes, shapes may be repeated and scaled or rotated.
- Shapes should be somewhat complex (not simple boxes and ellipses) and connect to the theme of the panel
- Color should connect to the concept for each one, (i.e. use blue for water, red/orange for fire)
- Each panel of each design should have 2 layers, a background and content layer, for a total of at least 16 layers, you may use more
- Designs may spill beyond the edge or into the adjacent panel
- All panels should have consistent and unified design style.
- No type may be used
- Save Color Swatches used throughout design
- Focus on Fundamentals of Design concepts such as scale, color, value, depth, use of space and the unity throughout each panel and each complete design
- Save final design as both an Illustrator file, .AI and a PDF

Start with the template file found on the Samples Drive. Leave the base layer, template layer locked, and create your new layers and content on layers above it!
